

## residentguard Software Enhancements

The following ResidentGuard LS 2400 software enhancements bring additional functionality and ease of use to the ResidentGuard wander management system:

- Create custom community floor plans to quickly see on which floor or building an alarm was activated.
- Understand patterns and monitor security with easier and expanded reporting options.
- Streamlined resident admission process with improved picture and name upload/download to keypad and nurse station displays.

## O accutechaccess System

Accutech Access offers enhanced electronic access control (EAC) capabilities, to control movement of staff, residents and visitors. Accutech offers a proprietary access control hardware that is integrated with existing EAC panels. Key advantages over competitor access control systems include scalability, simplicity, system status, advanced global reporting and direct integration to wander management.

Accutech Access features include:

- Management of wander management and EAC from one user interface
- Customized floor plans that show both access control and wander management doors and functionality
- Reporting on both access control and wander management
- Additional EAC features such as, holiday/event scheduling, credential management from multiple sites, live activity view, etc..
- Robust "Compass" electronic access control board
- Backwards compatibility to existing access control panels

## **Example Scenario Using the New Functionality**

A door alarm occurs at the East exit. Clear the alarm with a keyfob and run a report on both the elopement and access control event from the "access" software.

ResidentGuard

**Accutech Access** 

Unified floor plan and reporting on any buildings

A single floor plan to see everything happening in your electronic access control and wander management system. Run reports on both systems from a single head-end.
